SUMMARY OF THE 8-STEP FLOODPLAIN AND WETLAND ANALYSIS FOR CANARSIE PIER ACCESS IMPROVEMENT PROJECT BROOKLYN, KINGS COUNTY, NEW YORK

Governor’s Office of Storm Recovery
U.S. Department of Housing and Urban Development Community Development Block Grant – Disaster Recovery

Introduction & Overview
The purpose of Executive Order (EO) 11988 Floodplain Management is “to avoid to the extent possible the long- and short-term adverse impacts associated with occupancy and modification of floodplains and to avoid direct or indirect support of floodplain development wherever there is a practicable alternative.” The purpose of EO 11990 Protection of Wetlands is “to avoid to the extent possible the long- and short-term adverse impacts associated with the destruction or modification of wetlands and to avoid direct or indirect support of new construction in wetlands wherever there is a practicable alternative.” This report contains the analysis prescribed by 24 CFR Part 55 and documents the eight-step decision making process for the Proposed Action and pertains to activities within the Special Flood Hazard Area (SFHA) as defined by the Federal Emergency Management Agency (FEMA), or its successors, pursuant to the National Flood Insurance Program (NFIP), or a successor program, whether advisory, preliminary, or final.

The Governor’s Office of Storm Recovery (GOSR), an office of the New York State Housing Trust Fund Corporation (HTFC), proposes to provide Community Development Block Grant – Disaster Recovery (CDBG-DR) funding for improvements to the pedestrian and bicycle access along Rockaway Parkway and Shore Parkway. These improvements will provide access to the Superstorm Sandy-damaged Canarsie Pier, mitigate safety hazards, enhance local mobility, lessen the negative effects of traffic congestion, and build a more resilient community. There will be no increase in impermeable surfaces.

The Proposed Action will result in impacts to the 100-year floodplain and tidal wetland adjacent area. Based on an analysis of the Proposed Action activities and locations described herein, it is concluded that there is a reasonable basis to proceed with funding for this Proposed Action within floodplain and wetlands. The CDBG-DR funding is administered through the New York State Rising Community Reconstruction Program which is using bottom-up community participation and State-provided technical expertise to develop resilient and sustainable communities. Thus, alternatives preventing or impeding the development of resilient and sustainable communities are not considered reasonable alternatives.

Step 1. Determine Whether the Proposed Action is Located in the 100-year Floodplain (500-year for Critical Actions) or results in New Construction in Wetlands.
According to the Preliminary FIRM panel 3604970219G, approximately 1-acre of the Proposed Action is within a 100-year floodplain and 1.18 acres are within a tidal wetland adjacent area. A floodplain map and a tidal wetland map are attached.

The Proposed Action location is mapped as an adjacent area of New York State tidal wetlands. Since bulkheads and roads are located between the tidal wetland and the adjacent area, a permit is
not required for construction. Construction will take place within areas covered with either asphalt or concrete. Trees will be planted in earthen areas. Activities will be in disturbed areas that do not contain natural vegetation and would result in temporary impacts to approximately 1.18 acres within the wetland adjacent area. Best Management Practices (BMP) will be implemented to prevent impacts to wetlands and waterways associated with Project construction. Once construction is completed, the function of the wetlands would remain unaltered by the Proposed Action.

The Proposed Activity would result in temporary impacts approximately 1-acre of the 100-year floodplain during construction. The majority of the project site is located within Special Flood Hazard Area (SFHA) Zone AE (areas within the one percent annual chance of flood). Other than tree planting activities, all other construction activities will take place in areas covered by asphalt and concrete. Once construction is completed, the function of the floodplain would remain unaltered by the Proposed Action.

**Step 2. Initiate Public Notice for Early Review of Proposal.**
Because the Proposed Action is located within a floodplain and tidal wetland adjacent area, GOSR published an early notice, that allowed for the public and public agencies to provide input on the decision to provide funding for the Proposed Action. The early public notice and 15-day comment period is complete.

"Early Notice of a Proposed Activity in a 100-Year Floodplain and Wetland" was published in the Brooklyn Home Reporter/Sunset News newspaper on October 11, 2019, with the 15-day period expiring on October 28, 2019. The notice targeted local residents, including those within the floodplain. (See the attached Early Notice and Affidavit of Publication). The notice was also sent to the following state and Federal agencies on March 8, 2019: HUD; Federal Emergency Management Agency (FEMA); U.S Fish and Wildlife Service (USFWS); U.S. Environmental Protection Agency (EPA); NYSDEC; NY State Historic Preservation Office (SHPO); NYS Office of Parks, Recreation and Historic Preservation; NYS Department of Transportation (DOT); and the NYS Division of Homeland Security & Emergency Services. The notice was also sent to agencies within the City of New York. No public comments were received.

**Step 3. Identify and Evaluate Practicable Alternatives to Locating the Proposed Action in a 100-year Floodplain (or 500-year Floodplain if a Critical Action) or Wetland.**
The New York State Rising Community Reconstruction Program is structured to provide eligible communities’ resources and expertise to build projects resilient to future flooding events.

The primary alternative for the current Proposed Action is the “no action” alternative. Not undertaking the Project would not be consistent with the goals and objectives of the Canarsie NY Rising Community Reconstruction Plan to provide improvements to the Belt Parkway underpass and roundabout to increase pedestrian and cyclist ridership and reduce automobile use to Canarsie Pier as well as provide pedestrian safety. Greenhouse gas emissions and other air pollutants from cars would not be decreased and there would be no increase in the environmental sustainability of Canarsie and the surrounding communities. Additionally, the health and social benefits would not be realized including access improvements that would result in improved conditions for biking and walking in Canarsie, address existing safety concerns and increase the use of alternative modes of
transportation and providing expanded opportunities for recreation and active living for residents. Finally, improving access to Canarsie Pier may attract new visitors to the Pier as well as to the larger Community, which could contribute to the local economy.

The above identified alternatives will be re-evaluated in response to public comments received.

**Step 4. Identify and describe the Proposed Action’s direct and indirect effects associated with occupying or modifying the floodplain and wetlands.**

The Proposed Activity would have no direct or indirect impacts to the floodplain or wetland because the improvements will take place in areas covered with asphalt and concrete. No new impervious area would be created. The function of the floodplain would not change. The project area is located in the adjacent area of a tidal wetland. This area is separated from the tidal wetland by bulkheads and roads and therefore, the adjacent area is not hydrologically connected to the tidal wetland and therefore the Proposed Action would have no impact to the tidal area. The floodplain would be disturbed temporarily during construction.

The floodplain and wetland impact analysis focus on potential adverse effects on lives and property and on natural and beneficial floodplain and wetland values. Natural and beneficial values include consideration of potential for adverse impacts on water resources such as natural moderation of floods, water quality maintenance, and groundwater recharge. The Proposed Action would have no change on these values.

*Natural moderation of floods*

The Proposed Action would not have direct or indirect effects on the moderation of floods. The existing floodplain area would not be changed.

*Living resources such as flora and fauna*

No adverse effects on flora and fauna is anticipated since construction BMP following permit requirements and conditions will be implemented during the construction period and disturbed areas returned to improved conditions upon completion of project activities. Water quality will be protected from temporary disturbance from construction of the Proposed Action by preventing erosion, sedimentation, and the introduction of contaminants associated with construction equipment within the floodplain. Temporary erosion and sediment controls would be installed over the length of the Project. These measures would be installed prior to disturbance and would remain in place until all slopes are stabilized and revegetated as necessary. All stockpiled soils would be protected with sediment and erosion control measures in compliance with Section 207-02 of the NYS Department of Transportation Standard Specifications. All necessary precautions would be undertaken to prevent contamination of any streams, channels or waterways by silt, sediment, fuel, solvents, lubricants, epoxy coatings, debris, concrete leachate, or any other pollutant associated with Project construction would be avoided through proper equipment maintenance and washout basins, platforms, nets, and screens for equipment cleaning. Debris or excess construction material would be immediately removed off-site.

*Impacts to property and lives*

The Proposed Action does not present the potential to impact occupancy of the floodplain. The project area will continue to function as an access route to Canarsie Pier. The Proposed Action will not modify property in floodplains.
The Proposed Activity would provide waterfront access for recreation.

*Cultural resources such as archaeological, historic & recreational aspects*

Consultation with the New York State Historic Preservation Office (SHPO) and the Division for Historic Preservation (DHP) in the Office of Parks, Recreation and Historic Preservation (OPRHP) in accordance with Section 106 of the National Historic Preservation Act of 1966. SHPO evaluated the project for potential cultural and historic impacts and in a letter on October 1, 2019, SHPO stated that it is the opinion of SHPO that there will be no historic properties affected by the Project.

**Step 5. Identify methods to minimize the potential adverse impacts within a floodplain and wetland and to restore and preserve the natural and beneficial values.**

Implementation of the Proposed Action will comply with BMP and permit requirements and conditions set forth in the applicable Federal, State, and local permits. BMPs following permit requirements and conditions will be implemented during the construction period and disturbed areas returned to improved conditions upon completion of project activities. Water quality will be protected from temporary disturbance from construction of the Proposed Action by preventing erosion, sedimentation, and the introduction of contaminants associated with construction equipment within the floodplain. Temporary erosion and sediment controls would be installed over the length of the Project. These measures would be installed prior to disturbance and would remain in place until all slopes are stabilized and revegetated as necessary. All stockpiled soils would be protected with sediment and erosion control measures in compliance with Section 207-02 of the NYS Department of Transportation Standard Specifications. All necessary precautions would be undertaken to prevent contamination of any streams, channels or waterways by silt, sediment, fuel, solvents, lubricants, epoxy coatings, debris, concrete leachate, or any other pollutant associated with Project construction would be avoided through proper equipment maintenance and washout basins, platforms, nets, and screens for equipment cleaning. Debris or excess construction material would be immediately removed off-site.

While the Proposed Activity would temporarily disturb floodplain and wetland adjacent areas, once the construction is completed, the floodplain and wetland adjacent area will remain the same in function and size.

**Step 6. Reevaluate the Alternatives and Proposed Action.**

The “no action” alternative would not address the purpose and need of the Proposed Action. Not undertaking the Project would not be consistent with the goals and objectives of the Canarsie NY Rising Community Reconstruction Plan to provide improvements to the Belt Parkway underpass and roundabout to increase pedestrian and cyclist ridership and reduce automobile use to Canarsie Pier. Greenhouse gas emissions and other air pollutants from cars would not be decreased and there would be no increase in the environmental sustainability of Canarsie and the surrounding communities. Additionally, the health and social benefits would not be realized including access improvements that would result in improved conditions for biking and walking in Canarsie, address existing safety concerns and increase the use of alternative modes of transportation and providing expanded opportunities for recreation and active living for residents. Finally, improving access to Canarsie Pier may attract new visitors to the Pier as well as to the larger Community, which could contribute to the local economy. The impacts of these alternatives will be re-evaluated in response to any public comments received.
Step 7. If the only practicable alternative is locating in a floodplain, publish a final public notice.

It is the finding of this report that there is no practicable alternative to locating the project in the floodplain and wetlands. The location within floodplain and wetland adjacent area cannot be avoided to provide safe access to Canarsie Pier.

A combined Notice of Intent to Release Funds (NOIRROF)/final public notice was published in the Brooklyn Home Reporter/Sunset News newspaper by the Governor’s Office of Storm Recovery on November 8, 2019, in compliance with Executive Orders 11988 and 11990 and 24 CFR Part 55. The final notice details the reasons why the project must be located in the floodplain, a list of alternatives considered, and all mitigation measures taken to minimize adverse impacts and preserve natural and beneficial floodplain values. All comments received during the comment period will be addressed prior to funds being committed to the Proposed Action. The comment period started with the Notice of Intent to Release Funds (NOIRROF)/final public notice on November 15, 2019. The comment period for the Final Notice is 7 days, which expires at 5pm on November 15, 2019. The Final Notice was also sent to the following state and Federal agencies on November 15, 2019: the US Army Corps of Engineers, HUD, FEMA, USFWS, EPA, NYSDEC, NY SHPO, NYS Office of Parks, Recreation and Historic Preservation, NYS DOT, and the NYS Division of Homeland Security and Emergency Services. The notice was also sent to the agencies within the City of New York.

Step 8. Implement the Proposed Action

GOSR, operating under the auspices of the New York State Homes and Community Renewal’s (NYSHCR) Housing Trust Fund Corporation, is the responsible entity. GOSR will ensure that the Proposed Action, as described above, is executed and necessary language will be included in all agreements with participating parties. Implementation of the Proposed Action may require additional local and state permits, which could place additional design modifications or mitigation requirements on the Project. It is acknowledged there is a continuing responsibility by the responsible entity to ensure, to the extent feasible and necessary, compliance with Steps 5 through 7.

EARLY NOTICE OF A PROPOSED ACTIVITY
IN A 100-YEAR FLOODPLAIN

CANARSIE PIER ACCESS IMPROVEMENT PROJECT
BROOKLYN, KINGS COUNTY, NEW YORK
OCTOBER 11, 2019

To: All interested Agencies, Groups, and Individuals

This is to give notice that the Governor’s Office of Storm Recovery (GOSR), an office of the New
York State Housing Trust Fund Corporation (HTFC), has received an application from the City of New
York to use Community Development Block Grant – Disaster Recovery (CDBG-DR) funding from the
NY Rising Community Reconstruction Program to implement the proposed Canarsie Pier Access
Improvement Project in Brooklyn, New York (hereinafter, the “Proposed Activity”) and is conducting
an evaluation as required by Executive Order 11988 and Executive Order 11990 in accordance with U.S.
Department of Housing and Urban Development (HUD) regulations (24 CFR Part 55).

There are three primary purposes for this notice. First, to provide the public an opportunity to express
their concerns and share information about the Proposed Activity, including alternative locations
outside of the floodplain and wetlands. Second, adequate public notice is an important public education
tool. The dissemination of information about floodplains and wetlands facilitates and enhances
governmental efforts to reduce the risks associated with the occupancy and modification of these
special areas. Third, as a matter of fairness, when the government determines it will participate in
actions taking place in floodplains or wetlands, it must inform those who may be put at greater or
continued risk. Funding for the Proposed Activity will be provided by the HUD CDBG-DR
program for storm recovery activities in New York State.

The Proposed Activity includes improvements to the pedestrian and bicycle access along Rockaway
Parkway and Shore Parkway. The project includes tree removal and planting. Any shrubbery, debris,
fences, and other encroachments found on and within the city's right of way that interfere with the new
work will be removed.

As a result of curb relocation, existing street appurtenances projecting above paved surfaces, such as
hydrants, lampposts and traffic signal poles, bus shelters, etc., will have to be relocated. Portions of the
existing sidewalks will be widened and narrowed and associated curb reconstructed. Sidewalk
pedestrian ramps will be embedded with preformed detectable warning units at all corners. At all
proposed bus stop pads, new continuous sidewalk will be constructed for the entire length of the bus
pad, from the curb line to the property line/fence line.

Trolley tracks will be removed if encountered in excavations and new manhole covers provided when
required. Eleven (11) new catch basin connections will be made to existing sewers at manholes. All
new catch basins will be equipped with a hood on the outlet pipe.

The grass and tree covered area within the project area will be graded and seeded. There will be no
increase in impermeable surfaces
The majority of the Proposed Activity is located within Special Flood Hazard Area (SFHA) Zone AE (areas within the one percent annual chance of flood). The Proposed Activity would result in temporary impacts approximately 1-acre of the 100-year floodplain during construction. Other than tree planting activities, all other construction activities will take place in areas with existing asphalt and concrete cover. Once construction is completed, the function of the floodplain would remain unaltered by the Proposed Activity. Thus, the Proposed Activity would not result in any permanent impacts to the floodplain.

Floodplain maps based on the FEMA Base Flood Elevation Maps have been prepared and are available for review with additional information at http://www.stormrecovery.ny.gov/environmental-docs.

Any individual, group, or agency may submit written comments on the Proposed Activity or request further information by contacting Matt Accardi, Governor’s Office of Storm Recovery, 25 Beaver Street, 5th Floor, New York, NY 10004; email: NYSCDBG_DR_ER@nyshcr.org. Standard office hours are 9:00 AM to 5:00 PM Monday through Friday. For more information, call (212) 480-6265. All comments received by October 28, 2019 will be considered.

New elementary school to be built on Third Avenue

By Paula Katinas

District 20 is getting
a new elementary school, a local
taxpayer-advocate reported.

Councilmember Justin
Branman told the Home
Report that the New York
City School Construction
Authority plans to build a
330-seat elementary
school at 6740 Third Ave.
in Bay Ridge.

District 20 covers schools in Bay Ridge,
Dyker Heights and parts of Bensonhurst, Borough
Park, Sunset Park and Flatbush.
The district is among the
most overcrowded in the
city, according to
to local officials, who told the
Home Reporter earlier this
year that there is a shortage
of nearly 11,000 seats.

"Dyker Heights is indisputably
one of the best school districts in the entire
city. It is also the largest school
district in all of Brooklyn
and one of the most over-
crowded in the entire
city," said building new schools
here is a big priority for
me," Branman, a Democrat
representing Bay Ridge,
Dyker Heights and parts of
Bensonhurst, called the
new school "a big win for "our community" and said
it was also a big victory for "our kids who deserve
nothing less than a world-class public education
from day one."

The site at 6740 Third Ave. is located in the north
ern part of Bay Ridge.

The elementary school
would be the second school
to be constructed in the
near future in District 20.

In February, it was
announced that the SCA
will be building a 550-seat
middle school at 650 86th
St., the former site of a
man. The School will include
each restaurant.

Adèle Doyle, president of
the Community Education
Council of School District
20, said the CEC is pleased
the district will be getting
a new elementary school
and is looking to schedule
a public information session
for members to discuss the
plans.

"We are very excited to have another elementary
school site in the works in District 20," Doyle told the
Home Reporter.

Branman, meanwhile,
said he would continue
to work with the SCA
and the New York City
Department of Education
to identify potential
sites for new schools in District 20.

10. It was a vow he made
when he first ran for his
City Council seat in 2017,
he said.

"During the campaign, we
didn't make many promises but we did promise
that at least one new school in my
first four years. This will be number two," Branman
said.

Additional reporting by
Meaghan McDaid.

Early Notice of a Proposed Activity
In a 100-Year Floodplain
Canarsie Pier Access Improvement Project
Brooklyn, Kings County, New York
October 11, 2019

To all interested agencies, groups, and individuals:

This is to give notice that the Governor’s Office of Storm Recovery (GOR), an office of the New York State Housing Trust Fund Corporation (HTFC), has received an application from the City of New York to use Community Development Block Grant - CDBG-DR funds for the Canarsie Pier Access Improvement Project in Brooklyn, New York (hereafter, the "Proposed Activity") and is conducting an evaluation as required by Executive Order 1163 and Executive Order 1190 in accordance with U.S. Department of Housing and Urban Development's (HUD) regulations at 24 C.F.R. Part 51.

There are three primary purposes for this notice: First, to provide the public an opportunity to express their concerns and share information about the Proposed Activity, including alternative locations outside of the floodplain and setbacks. Second, adequate public notice is an important public education tool. The dissemination of information about floodplains and setbacks facilitates and empowers governments to reduce the risks associated with the occupancy and modification of these sensitive areas. Third, the public notice will enable the government to determine if the public wishes to participate in actions taken by the floodplain or setbacks. It must inform those who may be or could be affected by the Proposed Activity.

The Proposed Activity includes improvements to the pedestrian and bicycle access along Rockaway, Penelope and Shore Parks. The project includes new removal and planting. Any shrubbery, trees, tents, and other encroachments found on and within the buffer shall be removed. All trees shall be retained.

As a result of the above remediation, existing roadway sections requiring additional paved surfaces, such as hydrants, lamp posts and traffic signal poles, will be relocated or removed. Portions of existing sidewalks will be widened and narrowed, and associated curbs reconstructed. Sidewalk pedestrian ramps will be installed with pretreated detectable warning units at all corners. All proposed bus stops, new continuous sidewalks will be constructed to the entire length of the bus path, from the curb line to the property line.

Today, there will be removed pavement, curbs in exclosures and new landscape materials provided when required. Element (11) new catch basin connections will be made to existing sewer lines at manholes. Any catch basins will be equipped with a hood on the outlet pipe.

The grass and tree covered area within the project area will be graded and seeded. There will be no increase in impervious surfaces within the project area.

The majority of the Proposed Activity is located within Special Flood Hazard Area B (SFHA B) Zone A (areas within the percent annual chance of flood). The Proposed Activity would result in temporary impacts approximately 1-of-the-100-year floodplain. During construction, temporary impacts including landslides and erosion may lead to changes in areas with existing slopes and concrete cover. Once construction is complete, the function of the floodplain would remain unaffected by the Proposed Activity. Thus, the Proposed Activity would not result in any permanent impacts to the floodplain.

Public comments based on the FEMA Base Flood Elevation Maps have been reviewed and are available for review with additional information at http://www.gor.ny.gov/en/impactdocs.

Any individual, group or agency may submit written comments on the Proposed Activity or request further information by contacting the Office of Community Development (OCD), 6th Floor, 5th Floor, New York, NY 10038; email nycOGOR_Dr_Dr@phg.gov. Standard office hours are 9:30 AM to 5:00 PM Monday through Friday. For more information, call (212) 501-0040. Comments received by October 28, 2019 will be considered.
