Agenda

• Introductions

• Scoping Meeting
  – Why Are We Here?
  – What Are We Planning to Do?
  – How Do We Get It Done?

• Information Gathering
Scoping Meeting Overview

- Project Background
- Project Schedule
- Environmental Review Process
- Purpose and Need
- Proposed Action and Alternatives
- Environmental Review Schedule & Analysis
- How to Access the Draft Scope
- How to Submit Comments
Up to 74% of Suffolk County households have onsite wastewater treatment disposal systems.

Area is subject to heavy rainfall events such as Hurricane Sandy and Hurricane Irene.

Septic systems can fail due to flooding and/or groundwater elevation from these storm events.

Septic system failure leads to sewage backups and groundwater pollution.

Typical onsite wastewater treatment disposal system layout.

Rivers and Streams

Groundwater

Septic Tank

Leaching Pool
Project Background

Suffolk County has applied to the Hazard Mitigation Grant Program for funding of the Suffolk County Coastal Resiliency Initiative to mitigate impacts associated with septic system failures in 5 project areas:

- Southwest Sewer District No. 3 (SSD #3)
- Carlls River Watershed
- Connetquot River Watershed
- Patchogue River Watershed
- Forge River Watershed
How did we get here?

Numerous heavy rainfall events such as Hurricane Sandy and Hurricane Irene led to sewage backups and groundwater pollution as a result of septic system failure.

Suffolk County worked with local community representatives on the Suffolk County Sewer District/Wastewater Treatment Task Force.

In 2013, a feasibility study was prepared for the Forge River Watershed to document the sewage collection and treatment/effluent discharge requirements, associated capital and operation costs, and environmental and economic benefits.
How did we get here?

In 2014, the feasibility study was followed by the Forge River Nitrogen Reduction Report (amended in 2015) which evaluated engineering alternatives for sewering the proposed County sewer district.

The Task Force and 2015 Suffolk County Comprehensive Water Resources Management Plan identified the connection of parcels in the Forge River watersheds as a key measure to address several water quality and environmental quality issues.
Coordinated NEPA environmental assessment (EA) & SEQRA environmental impact statement (EIS)

FEMA
lead agency under the National Environmental Policy Act (NEPA)

Governor’s Office of Storm Recovery
lead agency pursuant to the State Environmental Quality Review Act (SEQRA)
Concurrent NEPA and SEQRA Environmental Review

• Both NEPA/SEQRA require agencies to determine whether a decision is subject to environmental review and whether an EIS should be prepared.

• Formal threshold requiring an EIS under NEPA is when an action “will cause an adverse environmental impact”, while the EIS threshold under SEQRA is when an action “may cause an adverse environmental impact”

• A Coordinated Environmental review is desirable to avoid redundancy and facilitate public review.
Purpose:

• To mitigate short-term and repetitive, adverse impacts on human life and property associated with septic system failures caused by natural hazards and to mitigate the long-term, adverse impacts of onsite systems on surface waters and coastal wetlands that reduce the ability of these waters and wetlands to provide natural protection against storm surge.
Need:

• Onsite wastewater treatment disposal systems in the project area are susceptible to both capacity and treatment / disposal failures during flooding and heavy rain events. Onsite systems in the project area failed during Hurricane Sandy.
Proposed Action & Alternatives

Alternative 1: No Action

- No new sewer district would be established and no additional sewer infrastructure or wastewater treatment facilities would be constructed to provide sanitary sewer service to presently unsewered parcels.

- The unsewered parcels in the project area would continue to use onsite wastewater treatment disposal systems.
Proposed Action & Alternatives

Alternative 2: Proposed Action

- **New Wastewater Collection and Conveyance System**: decommissioning of onsite treatment disposal systems for approximately 2,094 parcels and connecting these parcels to the new collection system with a combination of gravity and low-pressure sewers

- **New Wastewater Treatment Facility**: wastewater from the newly connected parcels would flow to a newly constructed membrane bioreactor (MBR) advanced wastewater treatment facility (AWTF)
Proposed Action & Alternatives

Alternative 3: Other Action Alternative(s)

- Repairing/Replacing septic systems
- Different Wastewater Treatment Technology
- Different Collection System Infrastructure
- Location Alternatives for AWTF
- Different Locations for Pump Stations
Environmental Review Schedule

- Draft Scope of Work: Dec. 23
- Scoping Meeting: Jan. 26
- Public Comment Period Ends: Feb. 16
- Final Scoping Document: Feb. 29
- Publish Draft NEPA EA/SEQRA EIS: 3rd Quarter ‘16
- Draft NEPA EA/SEQRA EIS Public Hearing: 3rd Quarter ‘16
- SEQR Findings: 4th Quarter ‘16
- Finalize NEPA Process: 4th Quarter ‘16

(Workflow diagram)
Environmental Impact Analysis

• Analysis will identify:
  – whether or not there are adverse impacts
  – any avoidance/mitigation measures that should be applied, and
  – if impacts cannot be mitigated, unavoidable adverse impacts will be described.
Environmental Impact Analysis

Physical Resources
Water Resources
Biological Resources
Land Use and Planning
